

Green Interior Design and Construction: The LEED Implementation Process

Presented by the U.S. Green Building Council

This workshop is intended for design professionals who are familiar with the LEED for Commercial Interiors Rating System, but new to implementing it on projects or looking to brush up on implementation best practices. It is also appropriate for those pursuing GBCI's LEED AP Interior Design + Construction credential.

Learn about the phases of a typical LEED for Commercial Interiors project, including key decisions that project teams must make and guidance on how to make them and how to communicate with team members. Engage with other participants in interactive activities using case examples to enable you to work hands-on with LEED tools, project templates in LEED Online v3 and implementation strategies. At the end of this workshop, you should be able to apply your newfound knowledge to real-life LEED for Commercial Interiors projects.

WHO SHOULD ATTEND?

Building industry professionals seeking to increase their understanding of the LEED for Commercial Interiors Rating System and green building strategies, benefits and resources, including:

- Design professionals • Consultants • Building owners • Engineers
- Contractors/subcontractors • Manufacturers • Construction professionals
- Developers • Facility Managers / Maintenance Professionals

To make the most of this workshop, you should have the following prior knowledge: Experience with building design and construction practices and high-level competency with the LEED for Commercial Interiors Rating System and LEED Reference Guide for Green Interior Design and Construction.

LEARNING LEVEL

This is a 300-level course. The 200-level *LEED Core Concepts and Strategies* course is strongly recommended as preparation.
